

Swimming interval training

Sports

The NS2097 is specially designed for SWIMMING INTERVAL TRAINING. It shows seconds, number of labs and lab time. The lab time can be set to any given time.

Function

The scoreboard is controlled by a handle connected to the top of the scoreboard. When switched on the seconds will start running continuously. If the lab time is set to i.e. 2:33 the timer will count up/down (optional). When the set time is reached the lab number is increased by 1 and the timer restarts. It is also possible to have sound signals when the number of labs is increased (horn is extra). When the scoreboard is not in use it can be set to show the time of day.

Mechanical

The scoreboard is build up in a strong aluminium frame to reduce weight and keep a firm stability. The scoreboard is waterproof. The rubber tipped feet ensures that the NS2097 can be placed on the wet floor near the pool, or you can mount it on the wall with the brackets enclosed.

Nautronic a/s have many years of experience in developing modular multisport scoreboard systems. We constantly adapt scoreboard systems to the prevailing regulations by the governing sports federations.

Every scoreboard produced by Nautronic a/s is a high quality product and have gone through rigorous testing before leaving the factory and being shipped off to its destination anywhere in the world.
